UT Austin EDS — Admin Guide

Project: University of Texas at Austin
Platform: AEM Edge Delivery Services (xwalk)
Organization: prajwal85
Repository: `github.com/prajwal85/eds-agent-demo`
Date: April 2026

Environment URLs

Environment	URL	Purpose
AEM Author	`https://author-p11300-e47725.adobeaemcloud.com`	Content authoring (Universal Editor)
Preview	`https://main--eds-agent-demo--prajwal85.aem.page`	Preview before publish
Live	`https://main--eds-agent-demo--prajwal85.aem.live`	Production delivery
GitHub	`https://github.com/prajwal85/eds-agent-demo`	Code repository

AEM Cloud Configuration

Instance Details

Setting	Value
Program ID	p11300
Environment ID	e47725
Content Path	`/content/eds-agent-demo`
DAM Path	`/content/dam/eds-agent-demo`
Project Type	xwalk (Universal Editor)

fstab.yaml

```yaml
mountpoints:
  /: https://author-p11300-e47725.adobeaemcloud.com/bin/franklin.delivery/prajwal85/eds-agent-demo/main
```

Code Sync & Deployment

How Code Deploys

1. Developer pushes to `main` branch on GitHub
2. GitHub Actions runs lint validation (JS + CSS + xwalk model rules)
3. AEM Code Sync detects changes and updates the delivery layer
4. Preview (`.aem.page`) reflects changes immediately

5. Live (`.aem.live`) updates after publish via Sidekick

CI/CD Pipeline

GitHub Actions workflow (`.github/workflows/main.yaml`): - Trigger: Push to `main` - Steps: checkout → setup Node.js → `npm ci` → `npm run lint` - Lint includes: ESLint (JS + JSON) + Stylelint (CSS) + xwalk rules

Lint Rules

Rule	Scope	Description
`xwalk/max-cells`	component-models.json	Max 4 cells per block model
`no-unused-vars`	JS files	No unused variables
`color-function-notation`	CSS files	Modern `rgb()` notation required
`alpha-value-notation`	CSS files	Percentage notation for alpha (e.g., `60%` not `0.6`)

Content Management

Publishing Content

1. Author edits page in Universal Editor
2. Preview at `.aem.page` URL
3. Publish via AEM Sidekick chrome extension
4. Live site updates at `.aem.live`

Bulk Operations

```
# Preview all paths
curl -X POST "https://admin.hlx.page/preview/prajwal85/eds-agent-demo/main/*"

# Publish all paths
curl -X POST "https://admin.hlx.page/live/prajwal85/eds-agent-demo/main/*"

# Invalidate cache for specific path
curl -X POST "https://admin.hlx.page/cache/prajwal85/eds-agent-demo/main/index"
```

Cache Management

Action	API Endpoint
Purge page cache	`POST /cache/{org}/{repo}/{ref}/{path}`
Purge all cache	`POST /cache/{org}/{repo}/{ref}/*`

Cache TTL: EDS uses aggressive edge caching. After publishing, cache updates automatically. Manual purge only needed for emergencies.

Media & Assets

DAM Structure

```
/content/dam/eds-agent-demo/
├── images/
│   └── homepage/           # Homepage images (9 files, 1.7MB)
├── media/
│   ├── dell-med-center-homepage.mp4  (24MB - hero video)
│   └── forTexas-loop.mp4            (10MB - outro video)
```

Image Optimization

EDS automatically optimizes images via query parameters: - `?width=2000&format=webply&optimize=medium` (desktop WebP) - `?width=750&format=webply&optimize=medium` (mobile WebP) - `?width=750&format=png&optimize=medium` (fallback PNG)

No manual optimization needed — the CDN handles it.

Security & Access

GitHub Repository Access

Role	Permissions
Admin	Full repo access, branch protection, secrets
Developer	Push to main, create PRs
Content Author	No repo access needed (uses Universal Editor)

AEM Cloud Access

Access managed via Adobe Admin Console: - Content authors need AEM Author access - Developers need GitHub repo access + AEM Developer access - Admins need AEM Cloud Manager access

---

Monitoring & Health

Site Health Check

```
# Check if site is serving
curl -I "https://main--eds-agent-demo--prajwal85.aem.live/"

# Check specific page
curl -I "https://main--eds-agent-demo--prajwal85.aem.live/about-texas"

# Check plain HTML delivery
curl "https://main--eds-agent-demo--prajwal85.aem.live/index.plain.html" | head -5
```

Performance

EDS delivers Lighthouse 100 by default: - All content served from CDN edge - Images lazy-loaded and auto-optimized - CSS/JS loaded per-block (only what's needed) - No render-blocking resources

Migration Inventory

Pages Migrated: 49 Total

Section	Count
Homepage	1
Resource Hubs	3
Section Landing	10
About	4
Academics	3
Campus Life	10
Energy	5
Research	3
Policy	8
Campus Carry	2

Custom Blocks Created: 8

Block	Purpose
hero-video	Homepage video hero
hero-banner	Interior page hero
cards-article	News story cards
sticky-panels	Impact sections with sticky scroll
columns-promo	Promotional callout
columns-impact	Impact stats
columns-outro	Outro with video
columns-resource	Resource link lists

Troubleshooting

Block Not Rendering on AEM Author

Symptom: Block appears blank on AEM Author page **Cause:** Block class name in authored content differs from block directory name **Fix:** Ensure `columns.js` has auto-detection logic for the content pattern, or re-author the block with the correct block name in Universal Editor

Video Not Playing

Symptom: Video shows as text link instead of playing **Cause:** Video URL not detected by JS (path format mismatch) **Fix:** Ensure video URL contains `.mp4` or `/media_`. Block JS checks both patterns.

CI Build Failing

Symptom: Push to main fails lint check **Common causes:**

- CSS: Using `rgba()` instead of `rgb(... / %)` notation - CSS: Using

`0.6` instead of `60%` for alpha - JS: Unused variables - JSON: Block model exceeds 4 cells (`xwalk/max-cells`)

Fix: Run `npm run lint` locally before pushing.

Cache Not Updating

Symptom: Published changes not visible on live site **Fix:**

```
curl -X POST "https://admin.hlx.page/cache/prajwal85/eds-agent-demo/main/{path}"
```

Backup & Recovery

Code

- All code in Git — full history available
- Main branch protected (requires passing lint)

Content

- AEM Author has version history for all pages
- Content can be restored via AEM Author UI
- `content/` folder in repo has exported `.plain.html` files as reference

Media

- Videos and images committed to repo as backup
- Primary hosting: AEM DAM
- Fallback: repo `content/media/` and `content/images/`
